

I have used the Boston traffic several times since it has been on my Satellite Radio and find it very helpful. It gives me better coverage than I may get on any one radio station. The radio station will only give you the information for Boston or the city that it is broadcasting from. I have received information several times on traffic that effects me on Cape Cod and the surrounding area which has never been available to me before. I have used the weather channel several times also and one time in particular when I went to Geneva, NY which is beyond Syracuse and inclement weather was approaching the area. I am urging you to REJECT NAB's petition 04-160. It is about time that there is another service available which is not regulated by so much advertising. That is the reason I subscribed to Satellite Radio.
